

Wax Scraper

JPM SUPER SWING

Field of erection:

- Floating-roof storage tanks for crude oil or products with parafines
- Additional installation at existing mechanical shoe sealings

Design:

- Special design with two edges pressed at the tank shell
- Balanced spring power to a gap-less pressing to the tank shell
- Individual scraper sheet for adjustment to the tank shell

Main characteristics:

- Parafine at the inside of the tank shell are scrapped off during the downward movement of the roof
- Double edge design guarantees an optimal cleaning of the tank shell, also when passing horizontal weldings
- Highly wear and tear resistant of all used materials
- Extremely long working period with very low maintenance
